

BREATHAPLASTA

Internal plaster to breathe with you in your home.

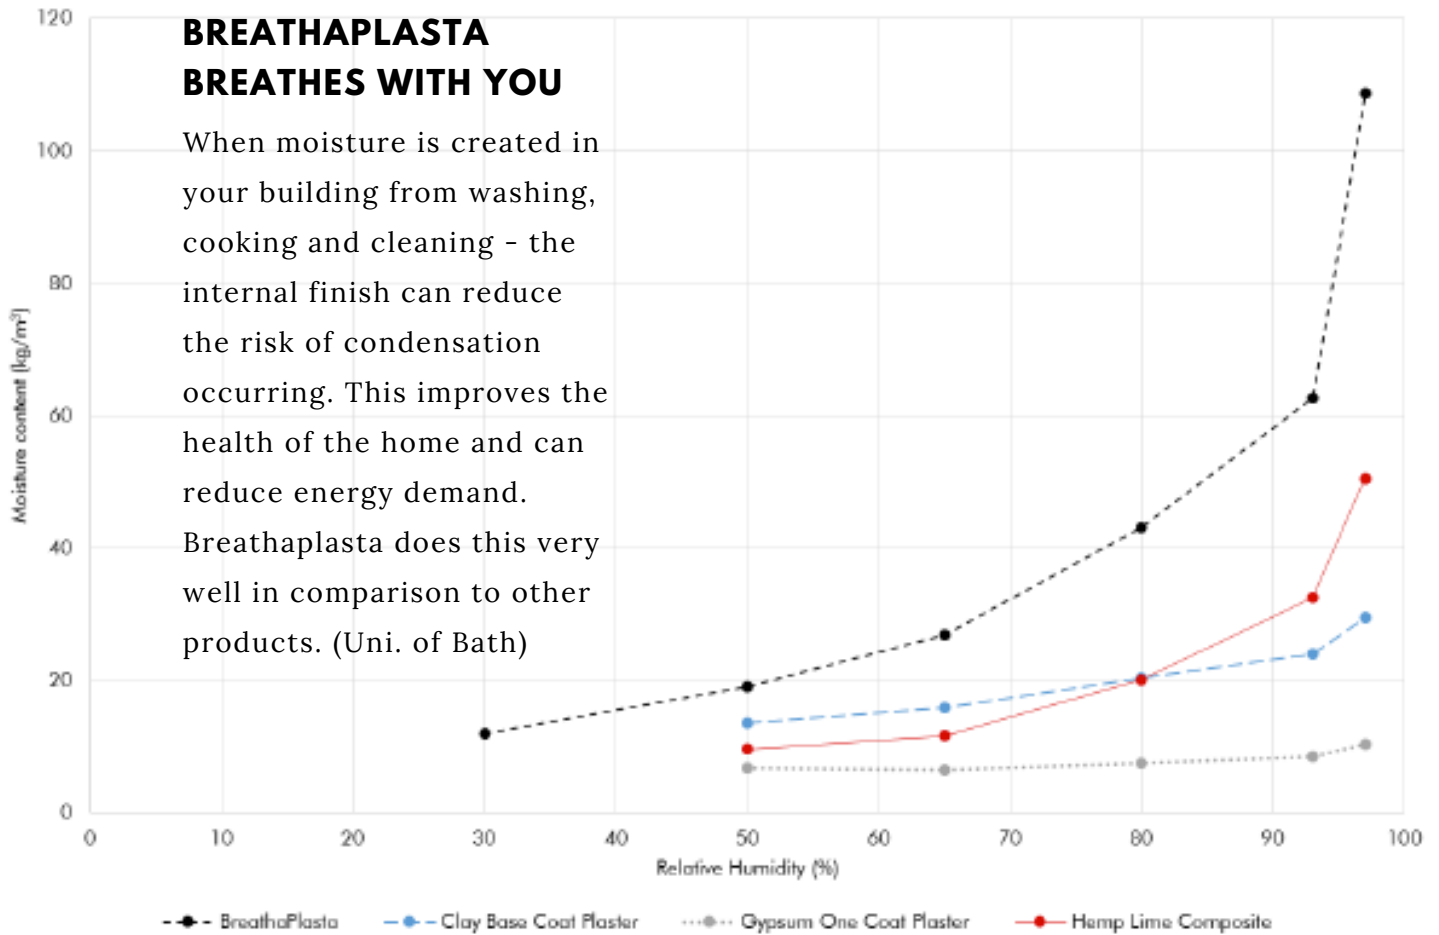

Figure 4 Isotherm comparison (moisture mass per unit volume)

Very easy to use

Breathaplasta has been designed to be an easy to install plaster to be used on a variety of substrates. It can be floated to a finish within 3 hours of applying the first coat. Coats can quickly be built up.

Low thermal conductivity

Due to Breathaplasta's 0.23 W/m.K thermal conductivity, this plaster can also reduce heat loss through walls, leading to energy savings.
